

Updated version with on-site servicing and troubleshooting included:

No.

KRA

Key Responsibilities

1

PCB Repair & Electronics Troubleshooting

Troubleshoot and repair electronic PCBs, controller boards, display boards, power supply circuits, sensors and other electronic assemblies used in fitness equipment.

2

Root Cause & Failure Analysis

Analyze PCB and electronic failures, identify the root cause of recurring faults, and recommend corrective and preventive actions to improve product reliability.

3

Cardio Equipment Troubleshooting & Diagnosis

Diagnose and troubleshoot cardio equipment such as treadmills, cross trainers, bikes, etc. Identify electrical, electronic, sensor, motor, controller and wiring-related faults. Carry out servicing, repair and troubleshooting at customer sites whenever required.

4

Client & Technician Communication / Service Support

Communicate with clients and service technicians to understand equipment complaints, provide technical guidance, support troubleshooting, coordinate issue resolution and follow up until complaint closure. Visit customer sites when required for technical diagnosis, servicing and issue resolution.

5

Spare Parts Identification & Requirement

Identify defective/replacement parts based on technical diagnosis and prepare accurate spare-part requirements, including PCB, motor controller, sensors, display, wiring harness, SMPS and other required components.

6

Spare Parts & Technical Documentation

Maintain accurate records of spare parts used, replaced, repaired and required. Maintain PCB repair records, failure reports, RCA reports, service records and other relevant technical documentation.
